

Sujet 2022:

Partie A:

Δ médiatrice de $[M, N]$

$$\overrightarrow{MN} = (4, -3)$$

$$X = (x, y)$$

Droite orthogonale
à milieu de $[M, N]$

$[M, N]$

$$0 = \overrightarrow{X} \cdot \overrightarrow{MN} \quad 4x - 3y = 0$$

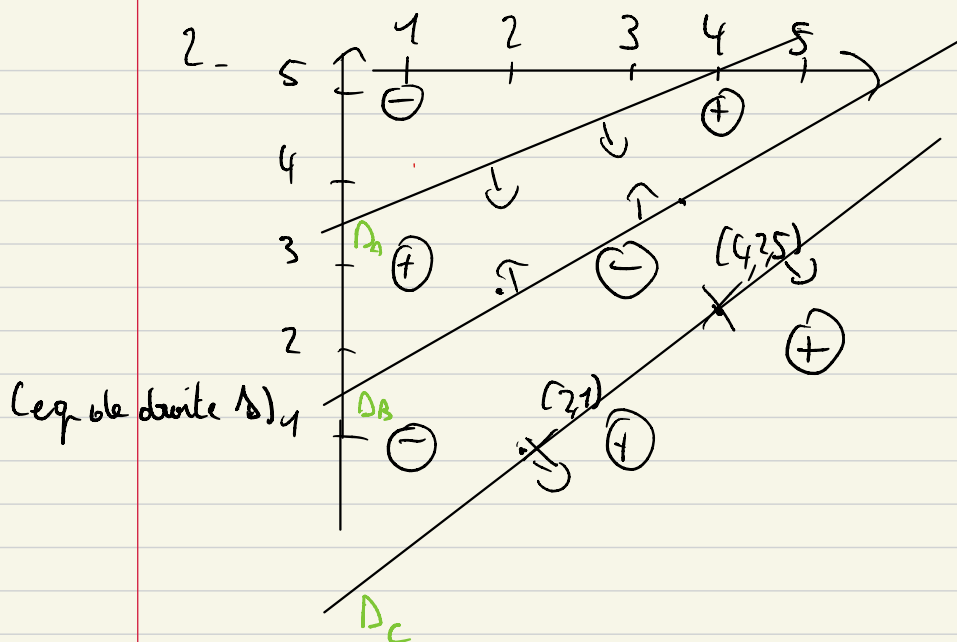

Soit $x \geq 4$ $y \geq 3$
Droite: $4x - 3y + 1,5 = 0$

$$F = (3, 3, 5)$$

Demi-plan: $4x - 3y + 1,5 \geq 0$

15 erreurs

$$D_A: y = \frac{2}{3}(x-1) + 4$$

$$P_A: 2x - 3y + 10 > 0$$

$$D_B: y = \frac{2}{3}(x-2) + 3$$

$$P_B: -2x + 3y - 5 > 0$$

$$D_C: y = \frac{3}{4}(x-2) + 1$$

$$P_C: -4y + 3x - 2 > 0$$

$$\text{Erreur} = 8 + 15 = 23$$

normale

erreur de
séparation = 0,5
erreur normale
= 1

3.

S, S errors

Parti B:

Ensemble A:

$$6 + \frac{15}{2} = 13, 5 \text{ erreurs}$$

Ensemble C:

Ensemble B:

$$6 + \frac{10}{2} = 11 \text{ erreurs}$$

? = demi-erreur

Partie C:

1. 11 positif 14 négatif

$$P(+)=\frac{11}{25}$$

$$P(-)=\frac{14}{25}$$

$$P_{\text{err}} = \frac{11}{25}$$

RA a priori
 $\rightarrow \ominus$

2. α connu

$$P(+ | \alpha=1) = \frac{3}{5} \quad (+)$$

$$P(+ | \alpha=\{2,3,4\}) = \frac{6}{15} \quad (-)$$

$$P(+ | \alpha=5) = \frac{2}{5} \quad (-)$$

10 errors

$$P_{\text{err}} = \frac{10}{25}$$

3. α, y connus.
